Q. What is the quickest way to get started with LMS King.

A. With our creation wizard, you can get started in as little as 10 minutes.

The lesson wizard works in reverse to how people picture the structure of the Course system. Unfortunately it seems that we will need to rewrite the wizard and add a couple of new ones in order to resolve this.

Currently, the wizard creates the Lesson, then the course, then the certification path and then you can put the lessons inside it.

The reason for doing this was that it allows you to exit at any of three stages and your lesson, lesson with Course, Certification path with course and lesson, will be created.

Because people seem to be having a little difficulty getting their mind around this, we've decided to break it down into 3 smaller wizards.

One to create a certification path, course and lesson as it is now.

One to create a course.

One to create a lesson and add questions to it.

However, doing this, does negate the reason for actually having the wizard in the first place.
