Q. How to I add a new lesson to an existing Certification Path?

A. Well firstly you sholdn't modify a course that has already started and students have already responded to lessons. You can corrupt data.

You should clear all the user data for that Certification path first.

To add a new lesson, you can go to the Manage tab, in the Lesson Manager and add a new lesson from there.

Alternatively you can go to the creation wizard and add the lesson there. However, it's advisable to use the manage tab.

Once you have added your new lesson, you should activate it.

You can activate it via the selector to the right of the tabs.
