Content:

There are two methods for adding students to the Certification Paths.

- 1) The students can add themselves to the certification path from the front end from the Purchase Certification paths page.
- 2) You can add them manually.

It's preferable by many admins, that you go through the wizard and create your content and test it.

Then you go to the certification path manager, clear all the user data for that certification path.

Then you put all the users into the students group, then edit the certification path and select all your students.

Save.

Now all your students have access to the Certification Path.
